# Secure the cloud

## With Opacus from Nordic Edge

Opacus is the missing link that guarantees secure login procedures and provides easy-to-use administration of clients and co-workers in the "cloud".

Today, an increasing number of organisations are offering their products and services as "cloud services". The move to the "cloud" is a paradigm shift in computing that is as revolutionary and important as the switch from mainframe computers to PC-networks. However while it offers potential opportunities, there are also risks and businesses need to protect sensitive information that is located in the "cloud". Opacus from Nordic Edge offers secure login procedures combined with efficient user administration. Opacus saves companies time and money, and can also be adapted to your company's specific conditions and needs.

## This is how it works »

### All you need is your cell phone

Are you tired of dealing with all the security tokens that are needed to log in to different services on the Internet? Replace them all, and make logging-in more secure, with your cell phone and the mobile client Pledge.
